

Euromod Blank Modules >

The Euromod system of wallplates provides a flexible and versatile method of installation. This modular system offers a wide range of wallplates and modules that allows the user to install as many or as few data or voice outlets as required. The system caters for small and large installations alike.

The Euromod Single and Double gang wallplate system is the basis of this modular approach. The single gang wallplate has a 50 x 50mm aperture and the double gang a 50 x 100mm aperture, which accepts the Euromod range of data, voice (module size 25 x 50mm) and blank modules.

Designed to offer flexibility and cost effectiveness, the user can choose to install only the number of outlets required, using the blank modules when needed to provide a professional looking finish.
